

iQ-Check™ Real-Time PCR Solution

Real-Time PCR Methods for the Detection of Food and Environmental Pathogens

The iQ-Check Solution

Providing Peace of Mind for Food Safety Testing

Based on PCR gene amplification and real-time detection, iQ-Check Kits use DNA primers and fluorescent probes specific to the target organism (Figure 1). Detection of a fluorescent signal for the amplified target sequences indicates the presence of the pathogen in the sample being tested. An internal positive control is included to validate any negative results in each well (PCR inhibitor monitoring).

Instruments and Software

iQ-Check Prep System

- Liquid handling platform for DNA extraction and PCR plate setup
- Completely integrated solution for pathogen detection with iQ-Check Kits
- Full sample traceability and bidirectional laboratory information management system communication

CFX Opus Deepwell Real-Time PCR System

- Delivers sensitive 5-color multiplex performance
- Flexible connectivity for data management and instrument control
- Open platform

CFX Manager Software, Industrial Diagnostic Edition (IDE)

- Easy-to-use sample setup
- Secure and customizable reports
- Ability to use open software for other laboratory tests

Easy-to-Use Protocols

Manual Solution: Four-Step Protocol

1. Enrich sample.

2. Extract DNA: collect enriched sample and lyse cells.

3. Set up PCR run: add extracted DNA to PCR wells.

4. Run real-time PCR and get your results.

Automated Solution: iQ-Check Prep System Workflow

1. Load enriched samples on an iQ-Check Deep Well Microplate or in tubes according to the sample worklist.

2. Load consumables, reagents, and samples and run the iQ-Check Prep System.

3. Run real-time PCR and get your results.

Perform up to 480 tests in a single 8 hr shift using one iQ-Check Prep and one real-time PCR system.

Applications

iQ-Check methods can be used as a powerful alternative to standard reference methods for the detection of food and environmental pathogens.

- Safely remove free DNA with our nontoxic, easy-to-use **iQ-Check Free DNA Removal Solution**
- Use **PIF Supplement** to harmonize enrichment for *Enterobacteriaceae*, *Cronobacter*, and *Salmonella* in milk powder, infant formula, cereal, and raw flour
- Screen for *Listeria* spp., *Salmonella*, or other targets as part of your environmental monitoring program or HACCP plan
- Harmonize enrichment for *Salmonella* and STEC detection in raw meat
- Detect threshold levels of *Salmonella* in poultry and rinse samples
- Use the **iQ-Check Purification Reagent** treatment for difficult matrices, such as spices, cocoa, or cannabis products
- Take advantage of the open software and system (genetically modified organism, allergen, or norovirus detection)
