RAPID'Chromogenic Media Technology and Applications

RAPID'Chromogenic Media are a complete range of highly selective chromogenic media designed to detect and enumerate a variety of microorganisms in food and environmental samples. They offer economical, labor-saving protocols and provide a shorter time to results than classical methods. In addition, the combination of the selected chromogenic mixture and high-quality raw material allows a high level of contrast, high selectivity, and high sensitivity, making the plates easy to read.
